

2008 Training Seminars

February 21, Thursday. Basic Irrigation Design.

8:30am – 4:00pm.

Location – HBA Building

Attendees will get a comprehensive overview and understanding of basic irrigation design. From site information collection to friction loss calculation. This design class is considered basic training but for those that have been installing or servicing irrigation for many years, but be assured this will be a refresher course to pick up on a few things you may have forgotten.

This course will cover the fundamentals of irrigation design. We will review principles of hydraulics, sprinkler spacing, zoning and pipe configuration, friction loss, matched precipitation and backflow prevention.

Students will need to bring a calculator, pencil and engineering scale (1" = 20').

February 26, Tuesday. Landscape Lighting - Product & Installation

8:00pm – 11:30pm

Location – Spring Brook Supply

Outdoor Low Voltage lighting is a natural fit for Landscape & Irrigation contactors. Learn how to correctly size wire and transformers. Learn what fixtures to choose for different applications. See the new and exciting product offered by Alliance Outdoor Lighting. Add this service to your business to increase your sales and profit.

February 29, Friday Advance Irrigation Design & Scheduling

8:00am – 2:30pm

Location – HBA Building

This course takes the skills of a basic designer and adds greater depth. Understanding Plant, Soil and Water relationship is critical to properly zone an irrigation system. Learn how soil intake rates, available water holding capacities and precipitation rates apply to a better design. How about the meaning of Evapotranspiration (ET). Let us teach you how important this is to proper irrigation scheduling. This class will shed new light on our ability as designer to be better stewards of water.

March 6, Thursday ET & 2-Wire Technology

8:00am – 2:30pm

Location – HBA Building

Water conservation and the need to lower cost of installation is the driving force for new product development in the irrigation industry. This class will first cover the basic understanding of plant, soil and water relationship along with the definition of evapotranspiration, ET. From there we will look at some current product available that will deals with ET rates for better water management. Also, we'll explore the 2-wire technology product with hands on demonstrations.

Seating is limited. Please RSVP to assure your seat.
 Fee for each class is \$35.00 per person. This covers cost of material and lunch.

There is no charge for the Lighting class...yes it's free. (but no lunch included)
 You must RSVP to attend.

Location of classes: **Home Builders Association**
(except Lighting) **211 Lincoln Ave.** (Corner of Lincoln and 9th St.)
Holland, MI 49423

Location of lighting class: **Spring Brook Supply**
11291 Lakewood Blvd.
Holland, MI 49424

If you have any questions, please call Spring Brook Supply and ask for Dan and David.

Please tear off at dotted line and return with payment your response.
 Seating is limited to the first 25 people per class.
